Heat Recovery

SAVING OF
COSTS

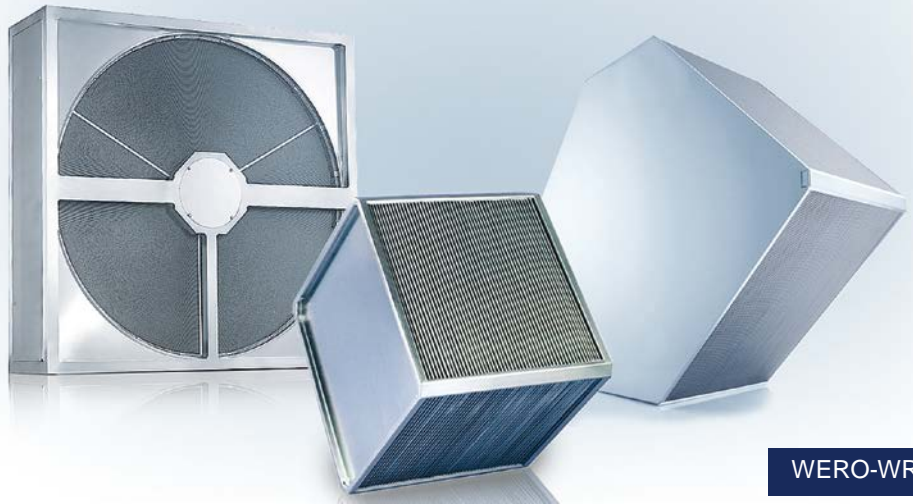

Low energy costs by
heat recovery

Wessel
Environmental Technologies

Member of  Deurotech Group

The WERO-WRG

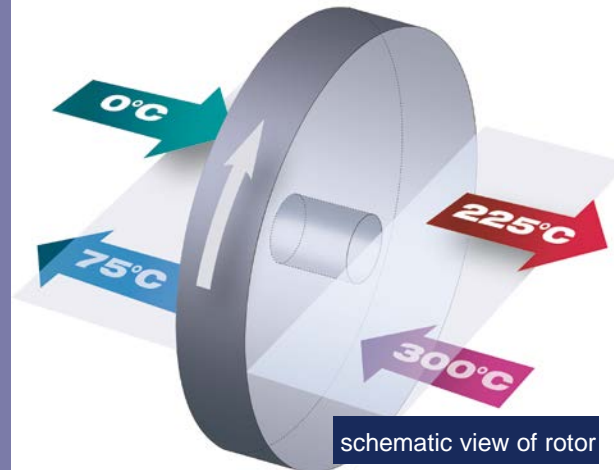

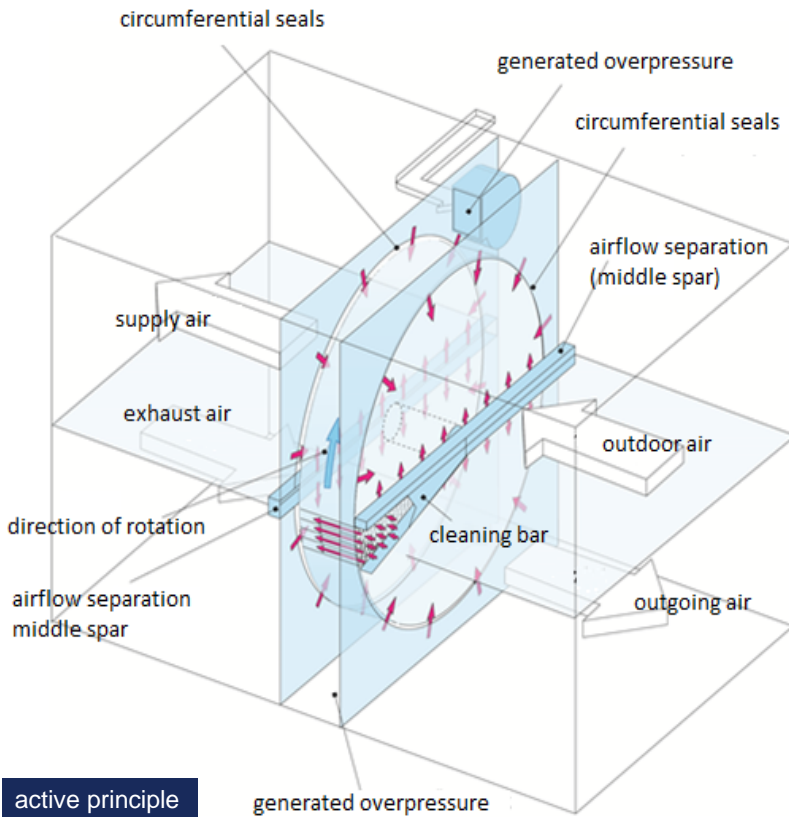

Heat contained in exhaust air is not released into the atmosphere but utilised, e.g., by means of a special heat exchanger for warm water production processes or for heating purposes.

WERO-WRG

Cost reduction

For the thermal energy requirement a reduction of up to 90 % is possible.

Advantages

Our systems distinguish themselves by their suitability also for dust-containing and aerosol-containing exhaust air. For this purpose special automatic cleaning systems were developed, which enable permanently high efficiencies for the heat exchange.
